

PVC wiring harness tape	
Introduction	PVC harness tape tape is made of PVC. It is made by applying rubber-type pressure-sensitive adhesive. It has good electrical insulation, flame retardant, aging resistance, temperature resistance, cold resistance, oil resistance and other characteristics.
Application	It is mainly used to protect and fix automobile wiring harnesses, engine wiring harnesses, front cabin lines, instrument lines, chassis lines, etc.
Property	
Product Code	P2010
Technical Parameters	
Color	Black, red, yellow, blue, green, white
Total Thickness [mm]	0.1±0.02
Backing	PVC
Adhesive	Rubber pressure sensitive
180° Peel Strength[N/inch]	≥1.0
Tensile Strength[N/cm]	≥15
Elongation at break[%]	150
Unwinding force[N/19cm]	2.0-6.0
Flame retardation	B
Operating temperature range(℃)	-10~105
Storage and shelf life	It is recommended to store in a clean and dry place, away from direct sunlight, to prevent damage to the packaging, and to avoid keeping it with volatile solvents. The storage temperature is 10-40° C and the humidity is 40-60%. To maintain optimal performance, this product should be used within 12 months from the date of manufacture.
